Kyu Eun Lee MD, PHD, FACS, is a Professor in the Department of Surgery at Seoul National University College of Medicine and serves as the Chief of Endocrine Surgery at Seoul National University Hospital. He graduated from Seoul National University College of Medicine in 1999 and received his Ph.D. in Surgery from the same institution in 2010. In 2018, he completed a research fellowship at Massachusetts General Hospital in the United States, where he expanded his expertise in endocrine surgery and research.

Dr. Lee began his academic career in 2009 as an Assistant Professor in the Department of Surgery at Seoul National University and became a tenured professor in 2020. Throughout his career, he has made significant contributions to both endocrine surgery and medical technology innovation. In 2008, he developed and performed the world's first Bilateral Axillo-Breast Approach (BABA) robotic thyroid surgery, a procedure known for its safety and high patient satisfaction. By 2021, the procedure had been performed over 5,000 times at Seoul National University Hospital.

Today, the BABA technique is performed in numerous countries, including the U.S., Singapore, Hong Kong, Taiwan, India, Vietnam, and Mexico, where it is used by endocrine surgeons to treat various endocrine diseases.

Dr. Lee has authored over 160 SCI-indexed papers and three books published by Springer. He also holds several international patents. His research, focused on thyroid cancer, parathyroid diseases, and robotic surgery, has made a significant impact on the advancement of endocrine surgery.
